ALEX MORGAN

Software Engineer

Email: alex.morgan@example.com
Location: Example City

PROFESSIONAL SUMMARY

Entry-level Software Engineer with a foundation in software development, debugging, testing, and API integration. Experienced in building small applications, working with structured data, and applying software engineering principles to solve technical problems. Interested in developing reliable, maintainable, and scalable software while continuously learning new technologies.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, Java, SQL
- **Frontend Development:** HTML, CSS, React
- **Backend Development:** Node.js, REST APIs
- **Databases:** PostgreSQL, MongoDB
- **Tools:** Git, GitHub, Visual Studio Code, Postman
- **Software Practices:** Object-Oriented Programming, Unit Testing, Debugging, Version Control

EXPERIENCE

Junior Software Developer

Example Technology Solutions
January 2024 – December 2025

- Developed and maintained application features based on documented requirements.
- Built reusable user interface components to improve consistency across application screens.
- Integrated frontend components with backend REST APIs to retrieve and display data.
- Wrote unit tests to verify application behavior and help prevent regressions.
- Investigated software defects, reproduced reported issues, and implemented fixes.
- Used Git branches and pull requests to collaborate with team members and review code changes.

- Updated technical documentation to support application maintenance and knowledge sharing.

PROJECTS

Task Management Application

Personal Project | Python, React, PostgreSQL

- Developed a task management application that allows users to create, update, delete, and organize tasks.
- Designed REST API endpoints to handle task-related operations.
- Implemented database operations to persist task information.
- Added input validation and error handling for invalid requests.
- Used Git to track changes and maintain a clear development history.

Inventory Tracking API

Personal Project | Java, PostgreSQL

- Created a backend API for managing product records, inventory quantities, and stock updates.
- Implemented CRUD operations for inventory data.
- Designed relational database tables to organize product and transaction information.
- Tested API endpoints with sample requests and verified expected responses.
- Added basic validation to prevent invalid inventory updates.

EDUCATION

Bachelor of Science in Computer Science
Example University
Graduated: 2023

ADDITIONAL INFORMATION

- Interested in backend engineering, full-stack development, and software quality.
- Willing to learn unfamiliar programming languages, frameworks, and development tools.
- Values readable code, collaborative problem-solving, and continuous improvement.
